Addendum to the *Updated Supplemental Traffic Impact Analysis for the Harris Quarry*

Dear Mr. Allen;

Whitlock & Weinberger Transportation (W-Trans) has recently completed the *Updated Supplemental Traffic Impact Analysis for the Harris Quarry* in the County of Mendocino. As part of the analysis, we completed an analysis of Vehicle Miles Traveled (VMT) associated with County-wide aggregate distribution based upon quarries that are likely to distribute within Mendocino County, which includes all quarries located in Mendocino County as well as quarries within neighboring parts of Sonoma County, Humboldt County and Lake County. This analysis was completed for existing conditions and projected conditions with the Harris Quarry expansion; however, it did not include the currently proposed Kunzler Quarry to be located north of Ukiah since it is still in the application process and has not yet been approved. We have been asked to provide an analysis with the Kunzler Quarry included in the VMT analysis.

A review of the Draft Environmental Impact Report for the Kunzler Quarry revealed that an analysis of that project's impact on VMT was not conducted. A new scenario, "Harris Quarry Project plus Near Term Cumulative" was developed in addition to the Base Permit and Project scenarios already analyzed using the same assumptions for the Kunzler Quarry as were applied to the Harris Quarry project.

The Kunzler Quarry site is located just north of the City of Ukiah, the largest population center in Mendocino County. In general quarries provide more aggregate to population centers that are closer to the quarry and correspondingly fewer trips to population centers of equal size that are further away. Likewise larger population sub-areas will have a greater demand potential than smaller sub-areas and will attract more trips.

For analysis purposes, it was necessary to hold demand equal over all scenarios to provide a common point of comparison. The number of trips and VMT from each quarry to each population center fulfilling the demand for aggregate within the County was calculated. Calculations are enclosed that should be considered part of Appendix F.

It is projected for Base Permit conditions that all supplying quarries will make a combined total of approximately 38,900 truck haul trips per year with a combined total of approximately 2.45 million miles traveled to provide aggregate within Mendocino County. With the increased production potential of the Harris Quarry to 200,000 cubic yards of material mined as well as including the Near Term Cumulative

increase in production, assuming that the demand for aggregate remains constant, it is projected that the total of truck hauls made countywide by all supplying quarries will remain constant at approximately 38,900 truck haul trips per year. There is a slight difference in truck trips per year between the three scenarios which is attributed to rounding in the calculations and accounts for about one-hundredth of one percent of all trips, so for the purpose of analysis these values are considered to be equal.

The increased production of the Harris Quarry project will not reduce the number of haul trips but will result in approximately 2.42 million vehicle miles traveled annually from all quarries and will result in 30,490 fewer VMT by aggregate haul trucks. Approval of the Kunzler Quarry together with the increased production at the Harris Quarry will not reduce the number of haul trips but will result in approximately 1.51 million vehicle miles traveled annually from all quarries, which is about 931,000 fewer VMT by aggregate haul trucks.

Although the number of aggregate haul trips is equivalent, the total VMT decreases because the Harris Quarry as well as the proposed Kunzler Quarry are closer to major population centers and geographical centers of the County, resulting in shorter trip lengths and correspondingly fewer vehicle miles traveled to transport the same amount of aggregate. These results are summarized in Table 8A, which is enclosed.

The proposed Kunzler Quarry would not produce asphalt concrete (AC) so this potential project did not affect the VMT calculation for AC production. For consistency with the report, VMT results for AC production are provided in Table 8A; however, this addendum does not change those results. Overall the Harris Quarry project has the potential to decrease the total VMT associated with hauling aggregate and AC within Mendocino County by approximately 183,500 VMT annually. When coupled with the near term cumulative increase in aggregate production associated with Kunzler Quarry, the two projects have the potential to reduce Countywide VMT for aggregate and AC distribution by 1.08 million miles annually.

It is anticipated that VMT related to aggregate demand will increase in the future as population and demand for aggregate increases in Mendocino County and the relationships developed based upon 2000 population data will remain valid in the future. As the demand for aggregate increases, while production levels within Mendocino County remain constant, the shortfall will be filled by out-of-County sources with these trips having greater travel distances, resulting in higher VMT overall. Conversely, the expansion of the Harris Quarry together with cumulative near term increase in production will result in fewer VMT in the future as a greater portion of the total demand will be met by quarries within Mendocino County and less by out-of-County sources.

The increased aggregate production with the Harris Quarry project and the near term cumulative increase in regional aggregate production will reduce the need to import aggregate into the County as more of the demand will be met by local sources. However, this increase in aggregate production will not be expected to eliminate the need to import aggregate to meet current and future demand, but importation of aggregate will be significantly reduced and the local quarries will come closer to fulfilling the need for these products in Mendocino County.

Thank you for asking us to provide these services and we hope that this information addresses fully addresses VMT impacts for Harris Quarry. Please feel free to call if you have any questions.

Sincerely,

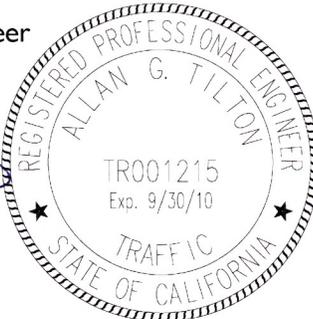

Tony Henderson, EIT
Assistant Transportation Engineer

Allan G. Tilton, PE
