I am writing to vehemently object to the installation of this dangerous technology in Willits. The least that should happen is an Environmental impact Report before any of this goes forward another inch. Preferably, JUST SAY NO. We do not need yet another powerful electromagnet/radiation source blasting out over our county's forests, animals, bees, and human beings with technologies whose effects have not been tested on anything or anybody. It's just blast blast blast and no accountability when clusters of people come down with leukemia and bees disappear "mysteriously." The fire danger alone is enough to put up some kind of cautionary signal to anybody with half a brain. Please do not let this horrible thing happen in our county. After it's in, there's no going back. We don't want it, we don't need it, stop it.
