Agenda

- U.S. Equity Education
- Current MCERA U.S. Equity Portfolio
- MCERA U.S. Equity Manager Structure Options

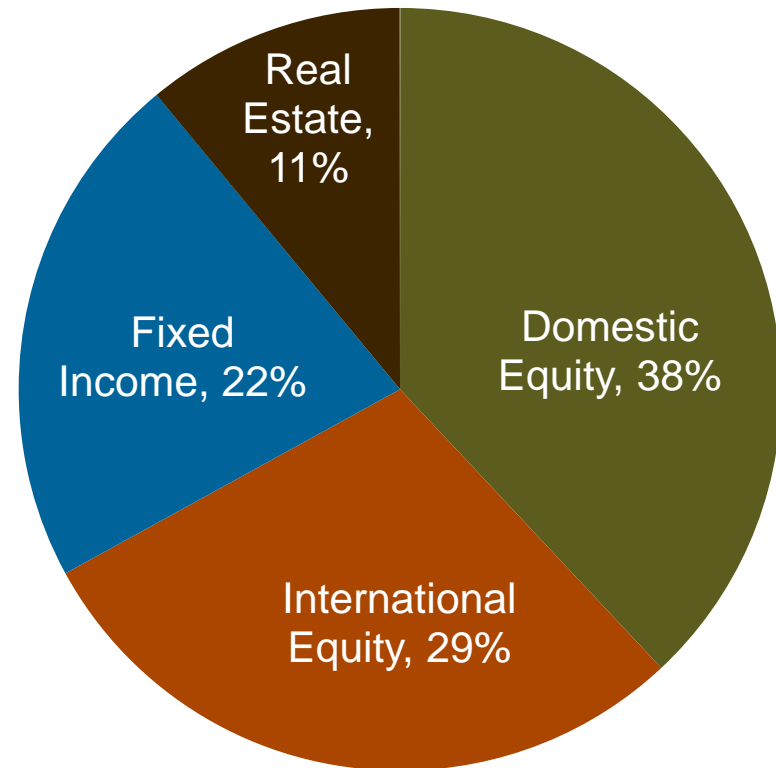

U.S. Equity Overview

MCERA Target Asset Allocation

- MCERA has a 38% target allocation to U.S. equity
- The U.S. equity allocation is benchmarked to the Russell 3000, which includes large, mid, and small cap stocks

MCERA Target Asset Allocation

Terminology

- Market capitalization - the value of all the shares of a company (current share price times outstanding shares)
- Equity styles – commonly defined by valuation, growth and size

Multi Cap	Large Cap	> \$10 Billion
	Mid Cap	\$1.5 - \$10 Billion
	Small Cap	< \$1.5 Billion

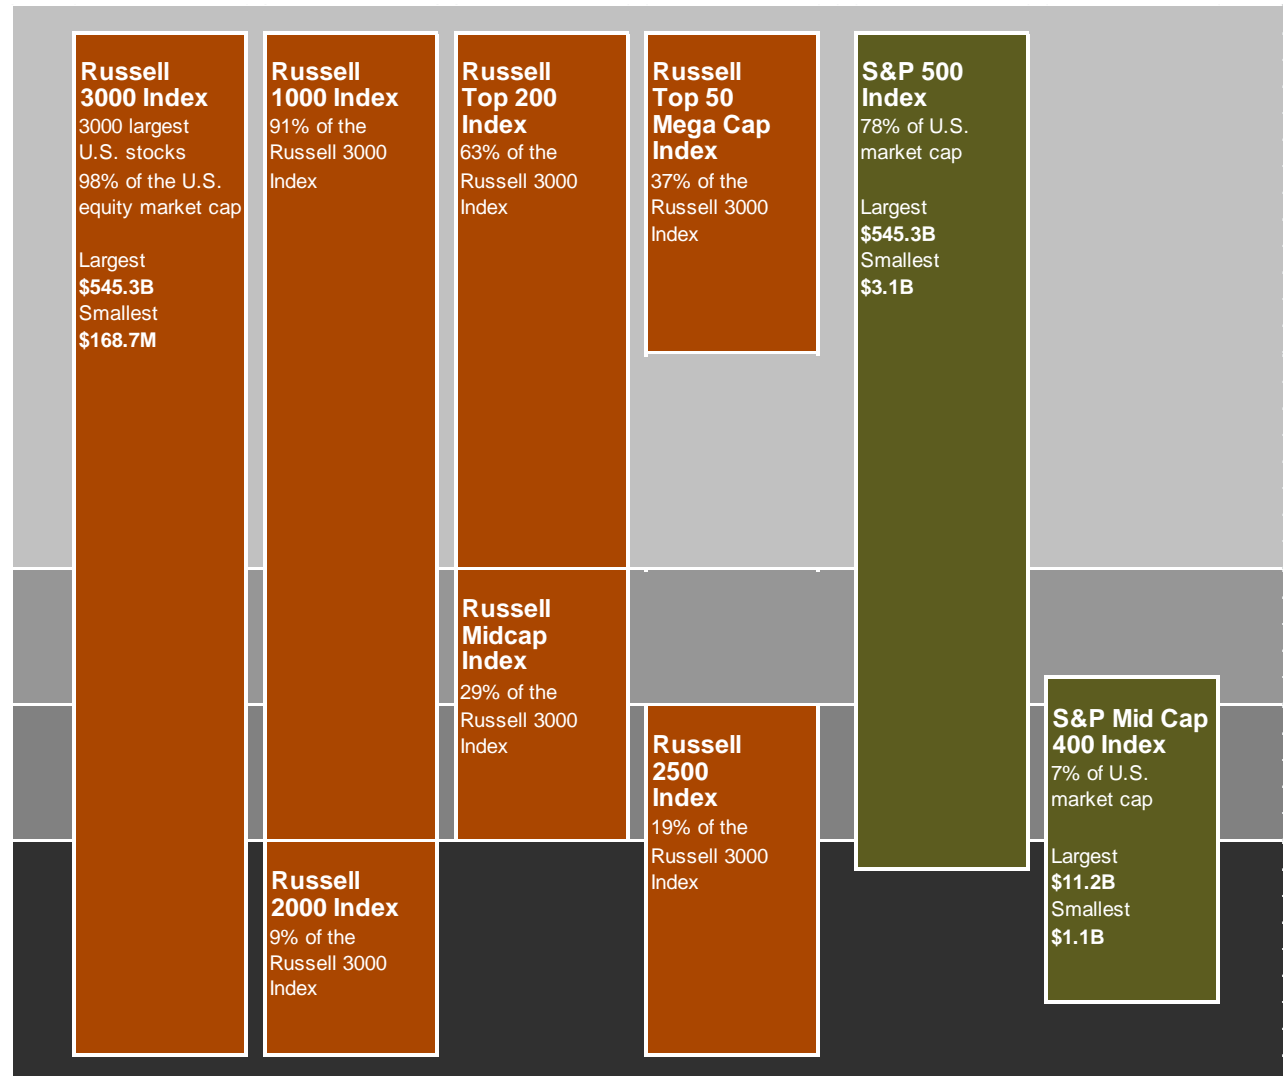

Blend (Core)	Growth	Expected to have above average growth in earnings and profitability
	Value	Undervalued relative to their potential for capital appreciation

Active vs. Passive Considerations

- Active and passive strategies can be complementary and can both play important roles in a portfolio
- Passive mandates provide low-cost exposure to the market
- Passive allocations are good liquidity vehicles for rebalancing, transition management, and making cash contributions/distributions
- Passive allocations are simple to monitor with less manager (and business) risk
- Passive mandates provide competitive performance in efficient markets and lower the tracking error for the total portfolio
- There are active managers who outperform the index – the challenge is to identify and hold them throughout their full performance cycle
- Like any style of investing, passive management will go in and out of favor over time

U.S. Equity Benchmark Descriptions

- The Russell 3000 is a capitalization-weighted index which includes large, mid, and small cap stocks
 - 63% large cap (Russell Top 200)
 - 29% mid cap (Russell Mid Cap)
 - 8% small cap (Russell 2000)
- For comparison, the S&P 500 includes primarily large and mid cap stocks with 84% in large cap and 16% in mid cap

Source: Russell, S&P as of 6/2015.

Market Performance

Market (Beta) Returns by Capitalization

Market (Beta) Returns

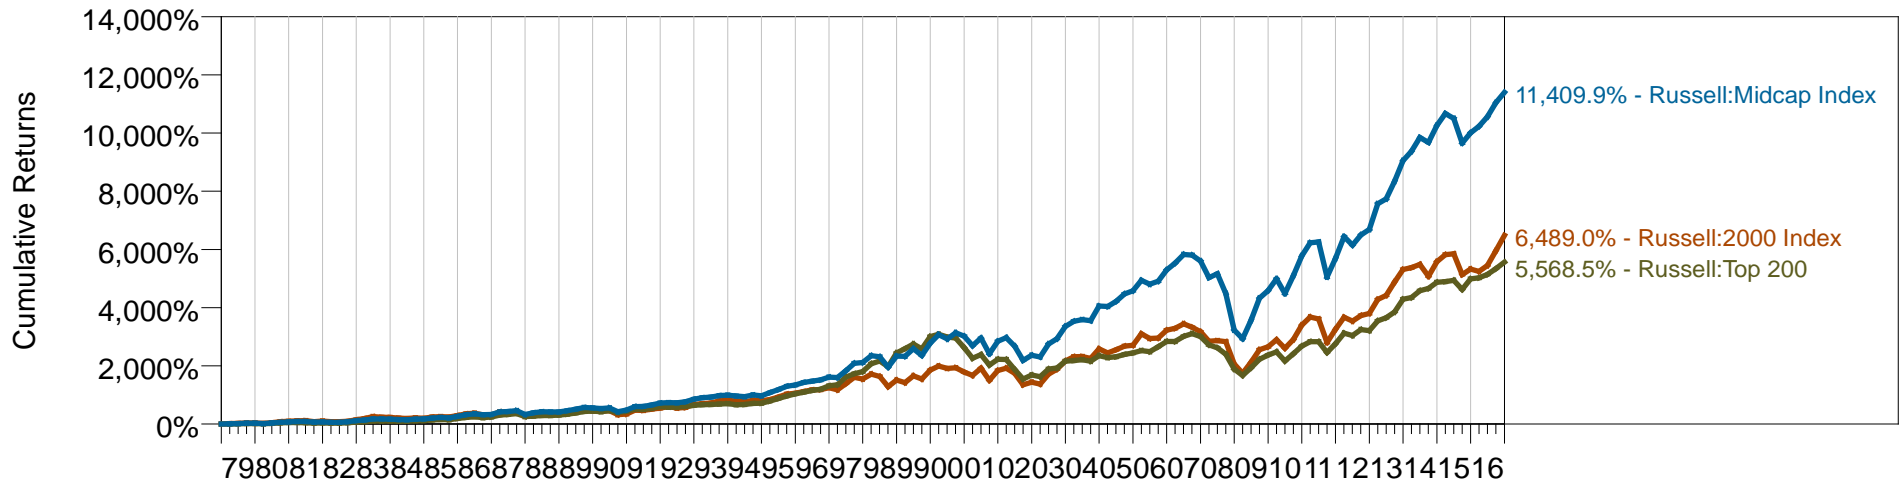

For Period Ending December 31, 2016

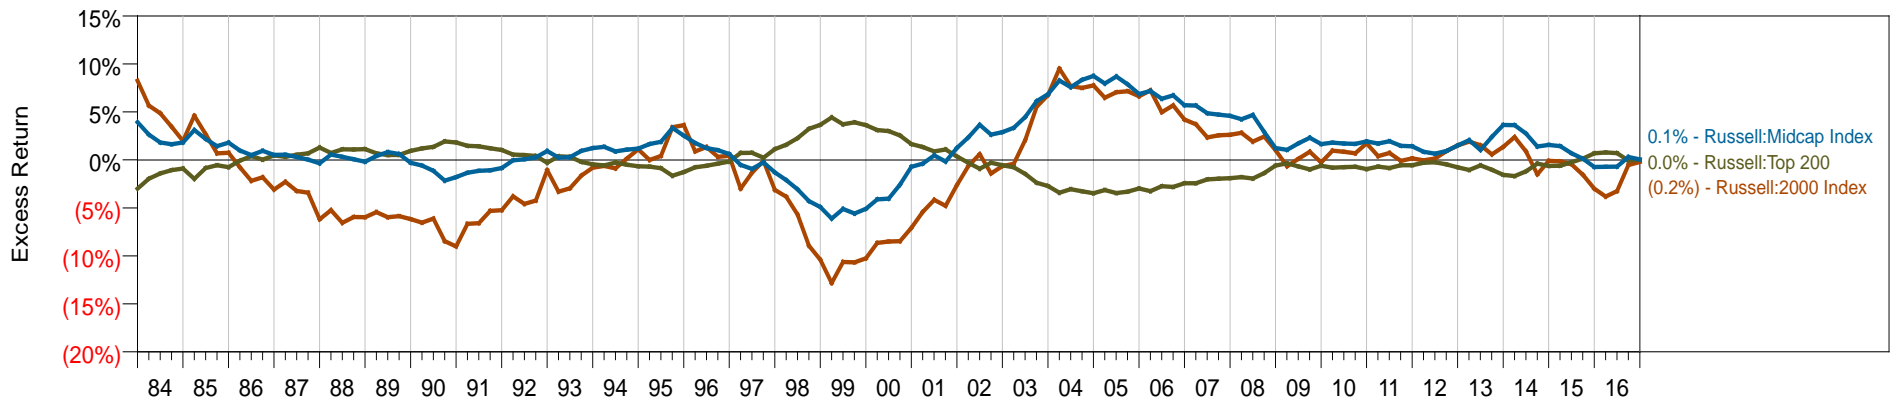

- The current structure features an intentional overweight to small cap, and to a lesser extent, mid cap
 - The tilt is expected to generate greater returns over the long run albeit with greater volatility
- A small and mid cap overweights can produce a positive or negative experience depending on the time period analyzed

Small and Mid Cap versus Large Cap

Cumulative Returns

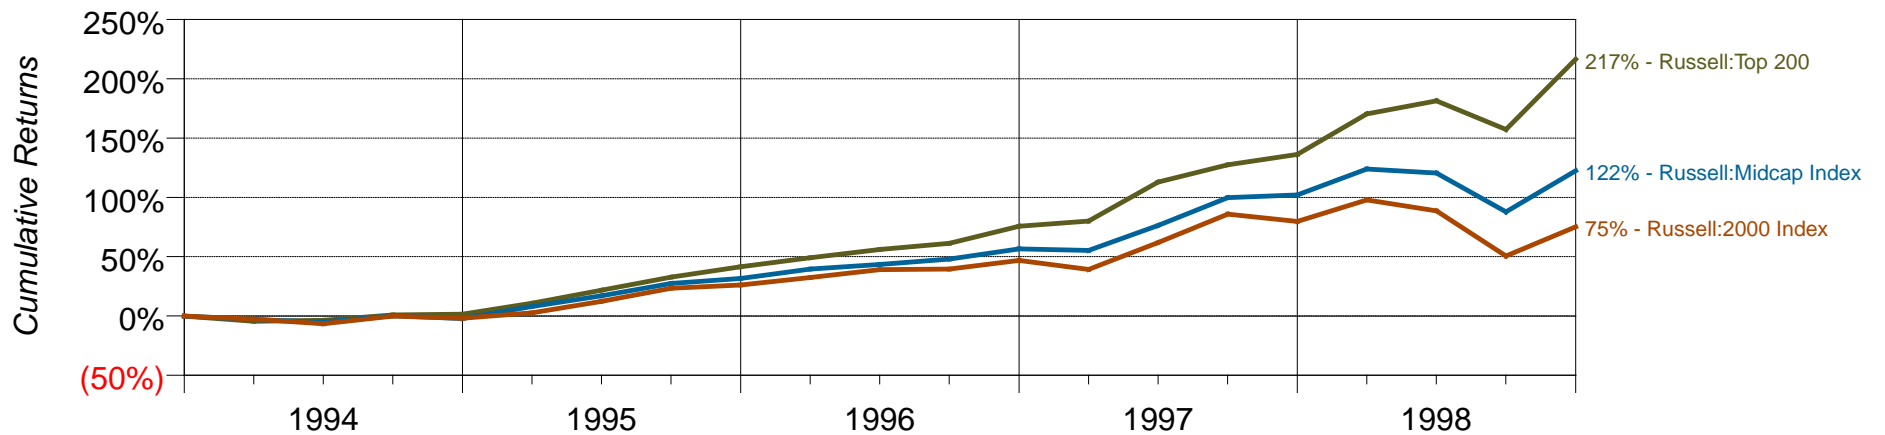

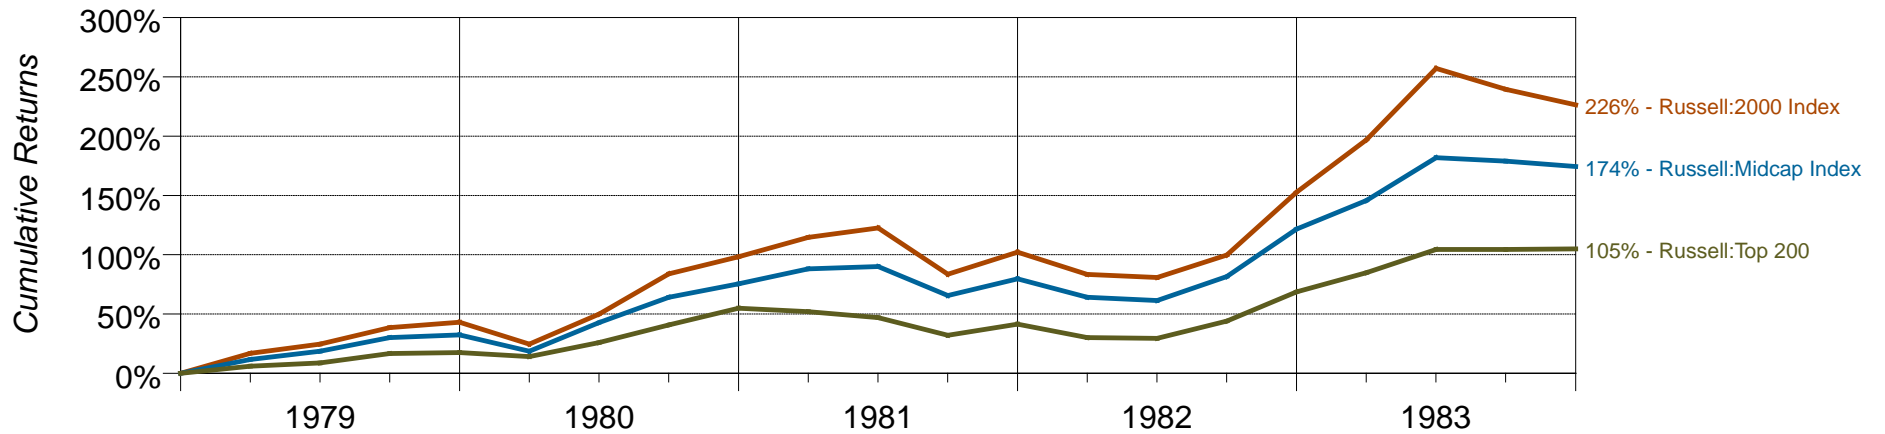

Rolling 20 Quarter Excess Return Relative To Russell:3000 Index

A Tale of Two Time Periods

Cumulative Performance for 5 years ending 12/31/1983 and 12/31/1998

Calendar Year Performance of Large, Mid and Small Cap

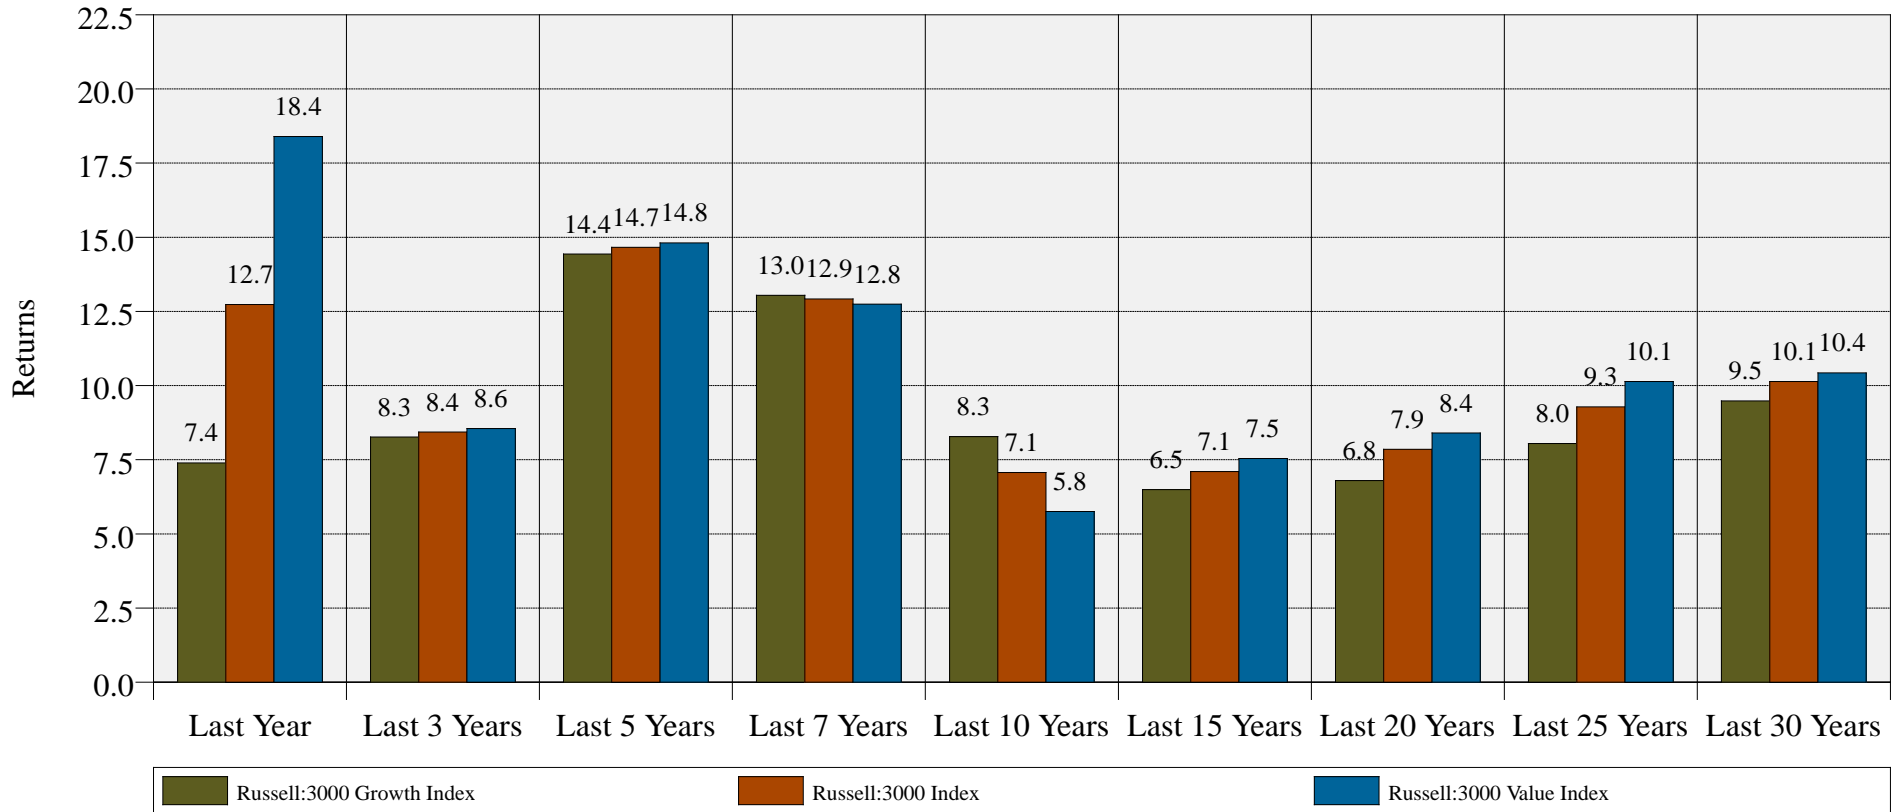

2007	2008	2009	2010	2011	2012	2013	2014	2015	2016

Market Performance

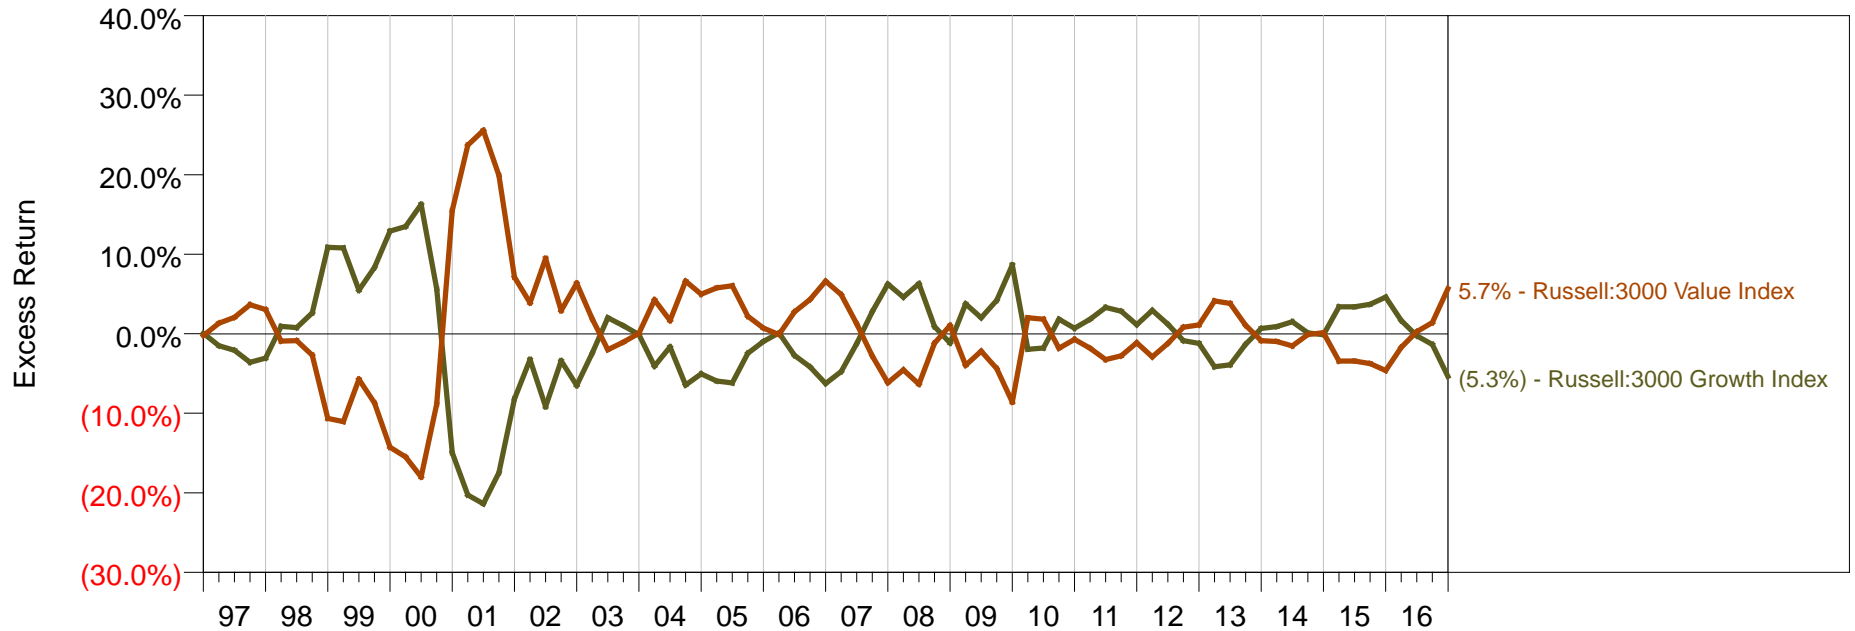

Market (Beta) Returns by Style

Market (Beta) Returns
For Period Ending December 31, 2016

Style Bias – Growth versus Value

Rolling 4 Quarter Excess Return Relative To Russell:3000 Index for 20 Years Ended December 31, 2016

- Market reversal in 2016 towards value-oriented stocks (current MCERA U.S. Equity portfolio has a slight growth tilt)
- It is virtually impossible to forecast style outperformance
 - Historically, growth and value performance has been cyclical
 - Growth cycles were mostly dominant past 10 years. Value cycles were mostly dominant 10 years prior to 2007
- A structure with balanced style exposures is preferred

Large Cap Broad Equity Style versus Russell 1000

❖ Large cap active management rarely adds value over the benchmark

Percent of rolling 3-year periods where Manager Beat Benchmark by more than Fee Hurdle – by Percentile

Fee Hurdle	0.25%	0.30%	0.35%	0.40%	0.45%	0.50%	0.55%	0.60%	0.65%	0.70%
Median	39%	38%	30%	30%	24%	15%	14%	14%	14%	10%

Average Annualized 3-Year Excess Return (gross) – Median Manager:

1.96%

Rolling 12 Quarter Gross Excess Return relative to Russell 2000 for 20 Years ended December 31, 2016

**Current MCERA U.S. Equity
Portfolio**

Current MCERA U.S. Equity Structure Observations

- MCERA U.S. Equity allocation performed well relative to the Russell 3000 Index prior to 2012, but has been challenged since that time.
 - Below benchmark and below median for trailing 1-, 2-, and 3-years ended December 31, 2016
 - Roughly comparable to benchmark and median for trailing 5- and 7-years ended December 31, 2016
 - Above benchmark and above median for trailing 10-years ended December 31, 2016
- The overall structure has a small and mid cap equity bias and a growth tilt
 - 7 growth managers and 5 value managers
 - Growth managers have more growth-oriented styles than value managers have value-oriented styles
- The structure has a large number of managers
 - Large number of managers (13) for an asset base of ~\$178M.
 - Many managers have overlapping styles
 - *Russell 1000 Index has 30% mid cap exposure, creating overlap with Large Cap and Mid Cap managers*
 - Difficult to monitor and rebalance
- Alternative structures will explore these primary questions:
 - *Is a small and mid cap overweight still appropriate going forward?*
 - *How can the structure be simplified?*
 - *How to deal with the overlap in mid-cap exposures between large cap and mid-cap managers?*
 - *What is the appropriate number of managers and how does that impact fees?*

Current MCERA U.S. Equity Structure

U.S. Equity Portfolio

Capitalization & Style Map for 5 Years Ended December 31, 2016

Style Map
for 5 Years Ended November 30, 2016

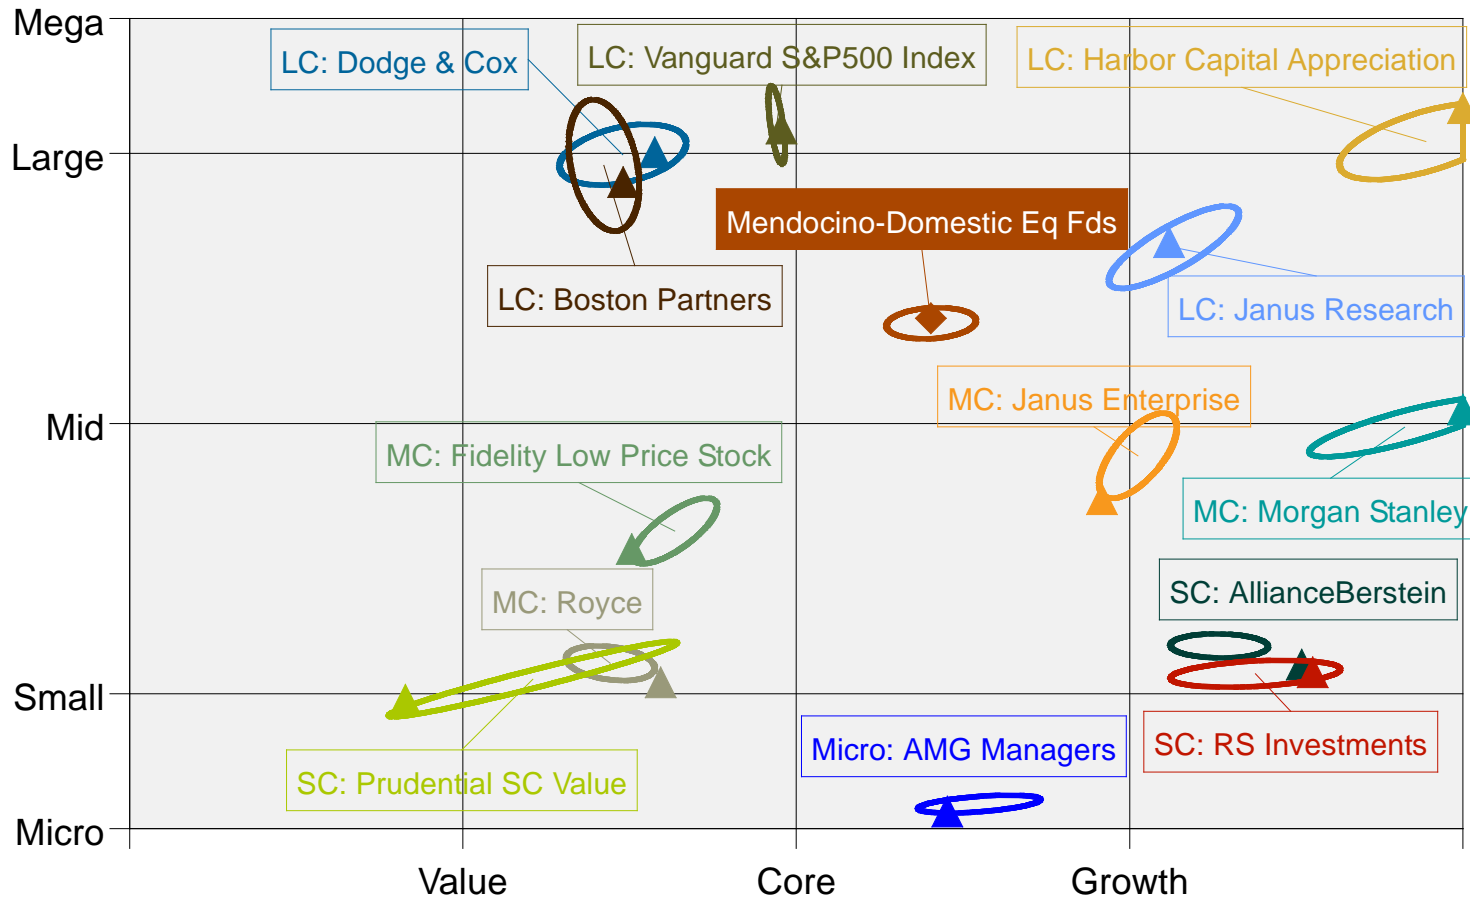

- Analysis confirms that the total U.S. equity portfolio has historically been overweight to small and mid cap stocks, and has a growth bias

U.S. Equity Portfolio

Capitalization & Style Map for 5 Years Ended December 31, 2016

Style Map
for 5 Years Ended December 31, 2016

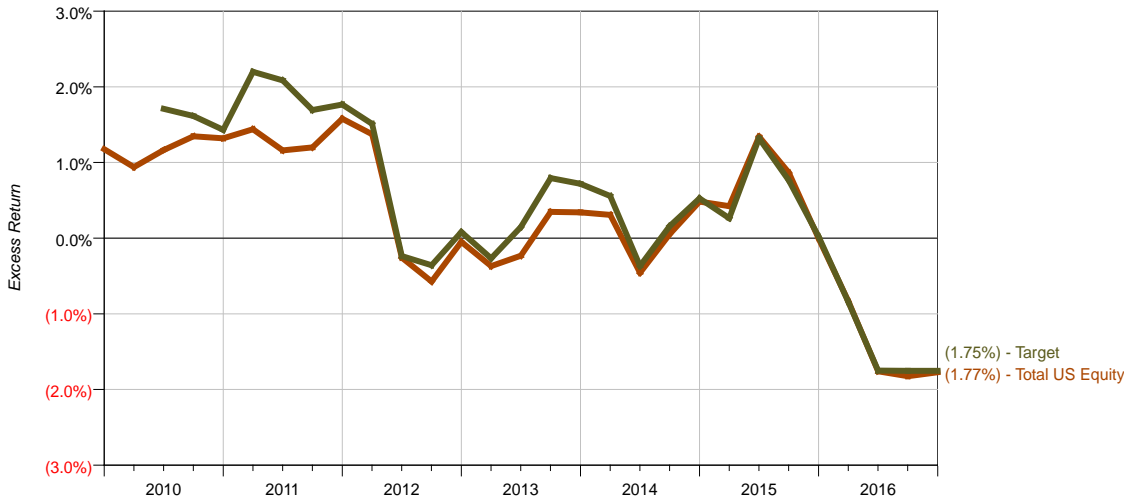

- Analysis confirms that growth managers appear more style extreme than the value managers

Performance

Return-Based: Excess-Returns and Tracking Error

Rolling 12 Quarter Excess Return Relative To Russell:3000 Index for 7 Years Ended December 31, 2016

Rolling 12 Quarter Tracking Error Relative To Russell:3000 Index for 7 Years Ended December 31, 2016

- Top charts show “relative-return” performance on a rolling 3-year (12 quarters) basis.
- Total US Equity represents the fund’s actual performance.
 - Excess returns have been weak and volatile over the past several years.
- Target shows what the current manager line-up would have produced historically.
- The bottom charts shows the tracking error in performance.
 - Total US Equity has exhibited total tracking error between 2-3%.

U.S. Equity Manager Structure Alternatives

General Guiding Principles of Investment Structure

- Active management offers the potential to add value over the index and can be complementary to passive management.
 - Excess returns are more difficult to achieve in efficient markets such as large cap U.S. equity
 - Potential for excess returns are compelling in small/mid cap US equity, non-US equity, emerging equity and non-US small cap equity
- Well-diversified market-neutral exposure with no unintended biases
 - Avoid overlapping mandates
 - May wish to purposefully add bias to small/mid cap U.S. equity and emerging markets equity for potential return enhancement
- Callan's overriding philosophy is to keep the structure as simple as possible
- Allocations to managers should be meaningful for the Plan
- The appropriate number of managers must balance style and relationship diversification with lower fees and more manageable monitoring
- Two primary influences on the appropriate number of managers
 - Size of the allocation relative to the total Plan
 - The higher the allocation, the greater the desired manager diversification
- Active versus passive
 - Fewer managers may be suitable when the portfolio is managed passively

Alternative Structures Objectives

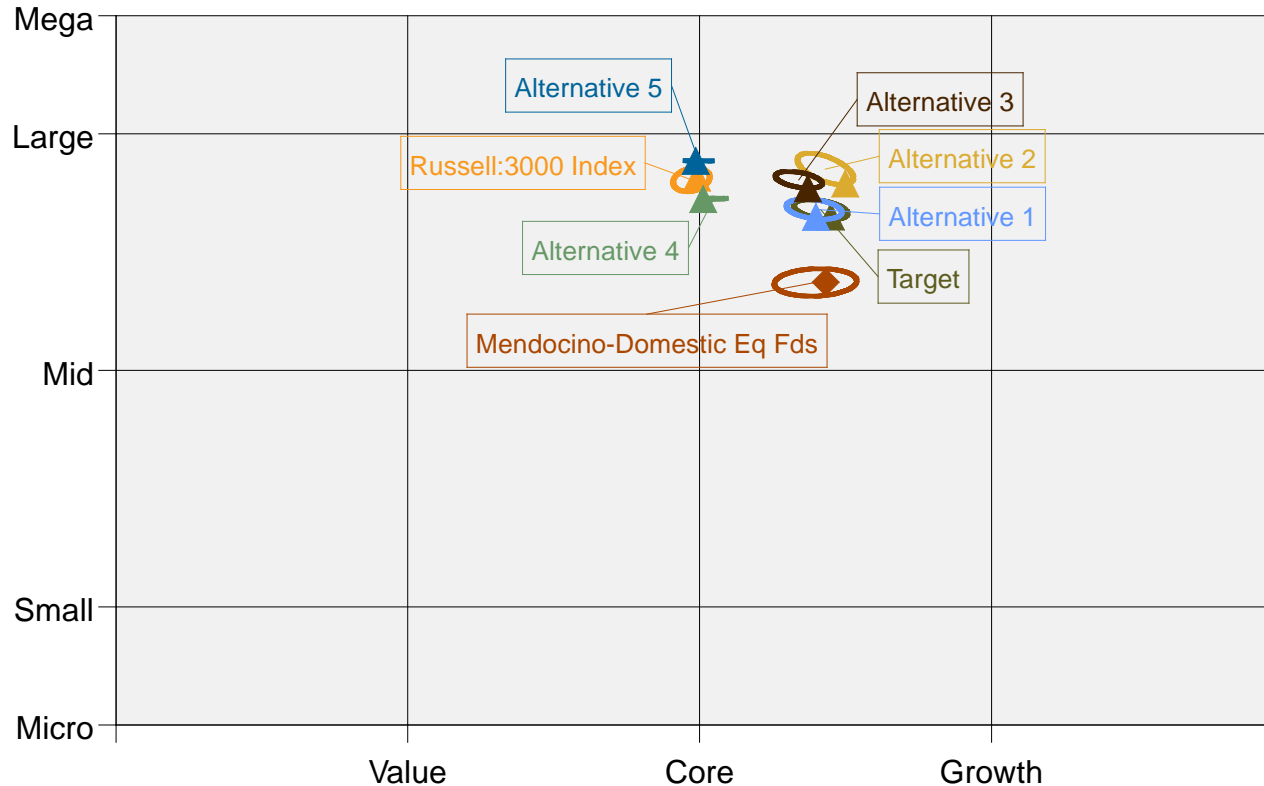

- In general, the objective of all 5 alternatives was to reduce (but not eliminate) the small / mid cap bias, while simplifying the structure by reducing the number of managers. Fee reduction was a secondary objective.
 - These structures are certainly not the only structures that can be considered
 - *Elements of each structure can be enhanced and/or combined with elements of other structures to get the right structure for MCERA*

Current	Alternative 1	Alternative 2	Alternative 3	Alternative 4	Alternative 5
<ul style="list-style-type: none"> • Most managers with 13 • Highest in fees 	<ul style="list-style-type: none"> • Objective - simplify the mid cap and small cap exposures • Two managers in each category, one value and one growth, achieve the desired goals • 9 managers structure 	<ul style="list-style-type: none"> • Builds off of Alt. 1, with the objective to further simplify the large cap exposures • Three managers in large cap achieve the desired goal: 2 active managers and 1 complementary passive • The 2 active managers would represent both categories - one value and one growth • 7 managers structure 	<ul style="list-style-type: none"> • Builds off of Alt. 2, with the objective of removing overlap with the large cap and mid cap manager benchmarks • To best achieve this goal, the mid-cap exposures are eliminated, and the passive benchmark is changed from S&P 500 to the Russell 1000 Index to gain mid-cap exposure passively • 5 managers structure 	<ul style="list-style-type: none"> • Objective is twofold • 1: Minimize fees by allocating all large cap and mid cap exposure passively, on the belief that active management in these market segments is less effective. • 2: concentrate active management in mid cap and small cap: one value and one growth in each category • 5 manager structure 	<ul style="list-style-type: none"> • Objective is twofold • 1: Minimize fees by allocating all large cap and mid cap exposure passively, on the belief that active management in these market segments is less efficient. • 2: concentrate active management in the small cap exposures with 2 managers: one value and one growth • 3 manager structure

Style Map

Holdings-Based Analysis: Capitalization and Style

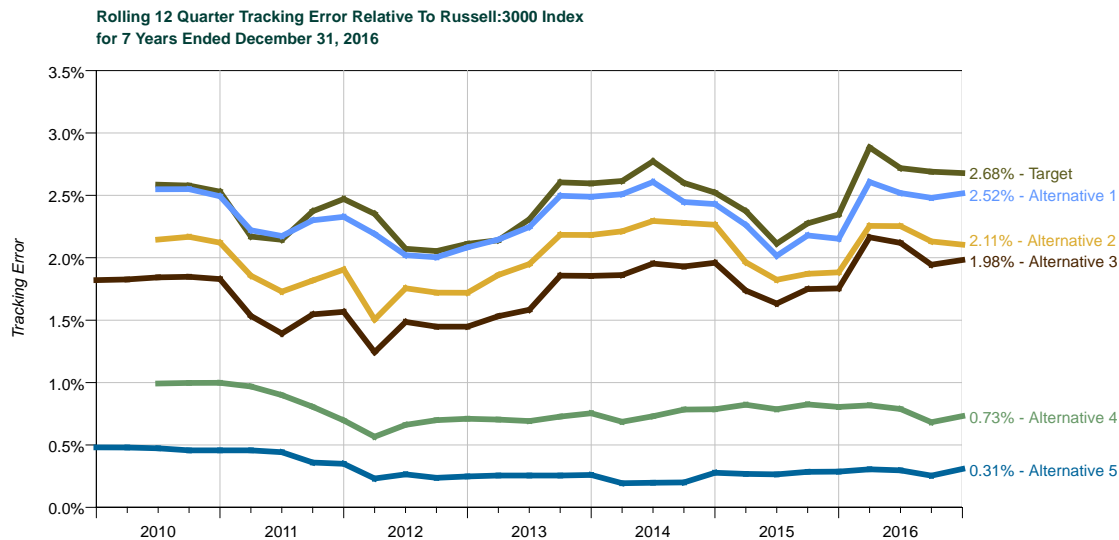

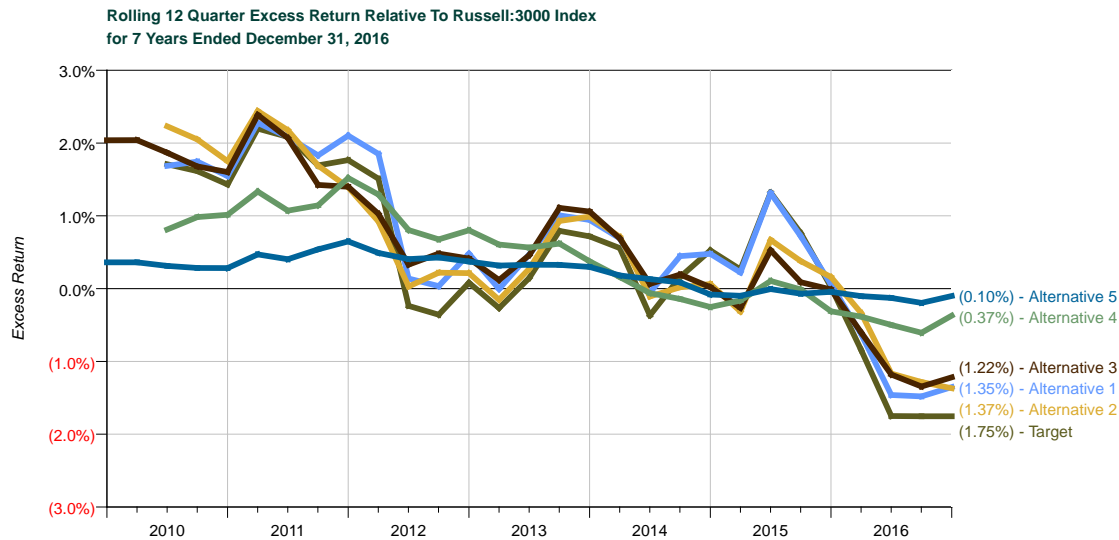

Style Map
for 5 Years Ended November 30, 2016

- The alternative structures, shown in the chart on a historical basis, move the total fund holdings to reduce (but not eliminate) the small / mid cap bias more in line with capitalization of the broad benchmark.
- However, the growth bias remains for Alternatives 1-3 due to the individual manager holdings. Alternative 4 and 5, with a large passive allocation, demonstrates the tightest alignment.

Performance

Return-Based: Excess-Returns and Tracking Error

- The top chart shows “relative-return” historical performance of the alternative structures on a rolling 3-year (36 month) basis.
- Alternatives 1-3 demonstrate a similar pattern of excess return as the current Target but with a more streamlined approach.
- The bottom charts shows the historical tracking error in performance.
- Alternatives 1-3 demonstrate historically lower tracking error than the current Target, while Alternative 4 and 5 would greatly reduce tracking error.
